

The Day the Internet Stopped Working in My Town

It was a Tuesday afternoon. I was doing my homework when the Wi-Fi stopped working. My phone had no signal too. I went outside and my neighbors were in the street. Nobody had internet in the town.

I wanted to help. I used a simple app on my computer to check the connection. I saw that hackers were sending too many fake messages to our town server. This is called a DDoS attack. It blocks the internet for everyone.

I went to the library and connected my laptop to the router with a cable. I changed the settings to use a back-up server and I blocked the hackers.

After five minutes, the internet worked again! Everyone was happy and I was very glad to help my town.

FLOWCHART: HOW I SOLVED THE PROBLEM
